## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-6, 10-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over US 6,874,262 in view of US 2004/0058274.

The '262 reference show that it is known to form a disk substrate having grooves and lands formed thereon where the groove width is within the claimed range and the groove width is smaller that the groove height. See col. 11, line 57 through col. 12, line 2. Specifically, the width may be less than 50 um or less than 10um. The depth/width ratio is encompassed. The reference provides "means" for providing the groove depth and width, i.e. the method is disclosed.

It is recognized that the reference does not specify land recording. However, the '274 reference shows that it is known to utilize the lands only when recording on a medium. See [0031]. Therefore, it would have been obvious to one of ordinary skill in the art to perform land recording using the substrate of the '262 reference. The reference specifies that when using a medium having a larger groove depth, land recording is preferred as the coloring matter tends to be better deposited on the land portions.

Claims 7-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over US 6,874,262 in view of US 2004/0058274 as applied to claims 1-6 above, and further in view of US 5,855,979.

The '262 and '274 references disclose the recording medium as described in the above rejection. It is recognized that the references do not disclose the claimed recording dye-in polymer. However, the '979 reference shows that it is well known to use dyes, such as xanthene, oxazine, coumarin, or acridine as recording materials. See col. 7, 17, 18. Further, these dyes may be dispersed in a polymer matrix. See col. 29, line 8. Therefore, it would have been obvious to one of ordinary skill in the art to substitute the coloring matter in the '979 reference for the coloring matter in the above cited reference. The substitution of one known material for another would yield predictable results.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Elizabeth E. Mulvaney whose telephone number is 571-272-1527. The examiner can normally be reached on Monday-Friday 9am-5pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mark Ruthkosky can be reached on 571-272-1291. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Application/Control Number: 10/573,742

Art Unit: 1794

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
